## The Koral Camo Jungle Gi

For years, Koral has been setting the pace with its line of gi's that many have tried to emulate but failed. The Koral top is a one-piece single weave so it is light and comfortable. Many other gis have a back seam, which can rub the back and spine. The Koral cut is carefully sized so it is closer fitting than many others but yet non-restrictive at the same time. Then there is the famous rubberized Koral collar that is more hygienic and dries faster than cotton. Plus Koral's strict quality control provides consistent sizing no matter which model you buy. So what do you do with a gi that has everything? You make it camouflaged, of course! Why blend into the crowd when you can blend into the jungle? The practical advantage, of course, is that it doesn't show stains which means you don't have to wash it as often. You'll be tapping out your friends just from the smell before you know it.
